

Summary of Tool Capabilities

1. Integration with Jenkins (CI/CD)

Full Jenkins integration available. Supports command-line execution and enables automated test execution during build and deployment processes.

2. End-to-End Multi-Application Testing

Supports consolidated workflows across Web (Customer), ACP SmartClient (Bank Employee), and Web (Customer confirmation), enabling complete STEX and other end-to-end scenarios.

3. JIRA Integration

Centralized test case repository with synchronization to JIRA issues. Supports linking execution results back to JIRA for traceability and reporting.

4. API Testing Support

Native REST and SOAP support. API tests can run independently or combined with UI steps for hybrid test flows.

5. Mobile Testing Support

Supports iOS and Android using real devices, emulators, and simulators with major automation frameworks.

6. Enterprise Server Deployment

Available as both stand-alone and server-based deployment, supporting central test management, shared repositories, and distributed parallel execution.

7. Dashboard Reporting

Includes initial reporting capabilities (execution results, pass/fail, partial coverage). Interfaces and data structures already support future expansion into trend analysis, KPIs, CI metrics, and advanced reporting widgets. Export options already available.
