

## INSTALLATION GUIDE

### System Name

### AR Scanner

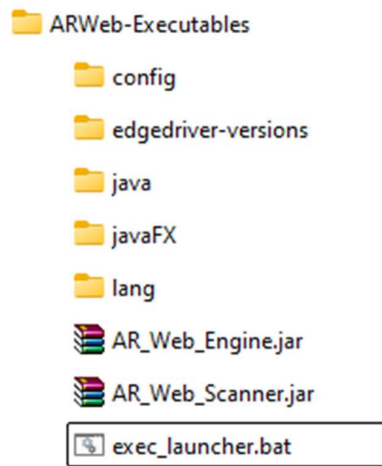

### Installation Steps

#### 1. Unzip Files

- Extract all files into a folder of your choice.

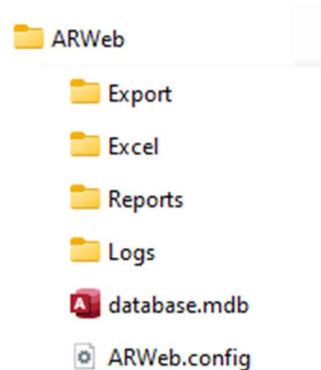

#### 2. Folder Structure

- Open the folder after extraction.
- Ensure the directory structure matches the example below:

#### Example:

- Create the necessary Database and Logs/Reports folder structure as shown:

### 3. Modify Configuration

- Edit the file **exec\_launcher.bat** to update the folder path according to your setup.
- Update the **SET PATH** variable in exec\_launcher.bat as needed. For example:

#### Default:

```
SET PATH=C:\Program Files\ARWeb;C:\Program Files\ARWeb\java\bin;C:\Program Files\ARWeb\javaFX;C:\Program Files\ARWeb\javaFX\lib;%PATH%
```

#### Custom Example:

```
SET PATH=D:\Projects\AllinWeb\ARWeb-Executables;D:\Projects\AllinWeb\ARWeb-Executables\java\bin;D:\Projects\AllinWeb\ARWeb-Executables\javaFX;D:\Projects\AllinWeb\ARWeb-Executables\javaFX\lib;%PATH%
```

- Also, ensure the correct path is set for ARWeb.config. If you have placed it in a different folder, update the reference accordingly:
- "D:\Projects\AllinWeb\ARWeb\ARWeb.config"

#### Notes

- Ensure all paths are correctly set in exec\_launcher.bat before running the system.
- Verify that the required folder structure exists before execution.
